Click on image above to see photos of the Pininfarina/BollorÃ© Bluecar. **Photos of the Bluecar EV** Last week, we wrote about the very promising Pininfarina/BollorÃ© Bo (B Zero) electric car, which is now known as the Bluecar. Many of you wanted to see more photos, so here they are. A whole slideshow about the Bluecar, interior, exterior, battery pack and supercapacitor. Everything we could find! Check it out.

"Also, wonder how much more distance I can go if it is sunny out."

Unfortunately the small amount of solar cells won't get you far. A really efficient electric car would use ~300whr per mile, and the hours of daylight that produce good power is far less than many people think. You could pull up some solar panels and take a good estimate of how much power a car roof would develop and do the math, but it comes out to "not much"

Wonder how long the recharge is.

Also, wonder how much more distance I can go if it is sunny out.

My only problem would be, sometimes I travel more than 153 miles straight. What then? Renting would be costly and seem like a waster.

Why don't we have cars like that in the US? :(
